

## Erratum

Please note the following correction to the January 21, 2003 Dispatch by M.B. Heintzelman (Gliding Motility: The Molecules Behind the Motion. 13, R57-R59): the identification of *T. gondii* myosin A docking protein (TgMADP) as the putative membrane anchor for the myosin-A complex, and the apparent association of TgMADP with the membrane via a covalently attached lipid, represents the unpublished work of S. Gilk, N. Devore, C. Beckers, and G. Ward. The author regrets the omission of the personal communication acknowledging their important contributions.
